Geological report at the seismic station IV.TERO - Teramo (TE)

Report geologico per il sito della stazione sismica IV.TERO - Teramo (TE)

Working Group: Deborah DI NACCIO Daniela FAMIANI Luca MINARELLI	Date: December 2019
Subject: Final report illustrating the geological setting for station IV.TERO	

INDEX

1. Introduction
2. Topographic and geological information
3. Geological map
4. Lithotechnical map
5. Survey map
6. Geological model
 - 6.1 General description
 - 6.2 Geological section
 - 6.3 Subsoil model
7. References

1. INTRODUCTION

The geological description is related to the site of studied seismic station. The coordinates are reported in Table 1.

Table 1.

CODE	NAME	LAT [°]	LON [°]	ELEVATION [m]
IV-TERO	Teramo (TE)	42.62279	13. 60393	673*
ADDRESS	SP47, 64100 Teramo TE, Italy			

* Coordinates from ITACA (Dec. 2019)

2. TOPOGRAPHIC AND GEOLOGICAL INFORMATION

Topographic information related to the site are reported in Table 2. Table 3 summarizes all available geological maps from literature for geological analyses.

Table 2.

Topography	Description	Topography Class	Morphology Class	EC8 Class
	reliefs with ridge top width much smaller than the base and slope $15^\circ \leq i \leq 30^\circ$	T3	SL*	A

* According to the nomenclature of ITACA (Dec. 2019)

Table 3.

Geological map	Source	Scale
IV.TERO	Geological map of Italy sheet 140 (Teramo)	1:100.000
IV.TERO	Carta Geologica d'Abruzzo (Vezzani & Ghisetti, 1998)	1:100.000
IV.TERO	Carta geologica dei bacini della Laga e del Cellino e dei rilievi carbonatici circostanti (Marche)	1:100.000

	meridionali, Lazio nord-orientale, Abruzzo settentrionale (Centamore et al., 1991)	
IV.TERO	Carta Geologica-Tecnica per la Microzonazione Sismica di Livello 1, Regione Abruzzo, comune di Teramo (May, 2019)	1:5.000

In Table 4 Geological, Lithological and Lithotechnical Units (according to Seismic Microzonation classification; Technical Commission MS, 2015) are described and are concerned to maps of following chapters. The term “original” means the result comes from a preexisting cartography (Table 3); the term “deduced” means the result comes from an interpretation of a preexisting cartography according to the nomenclature of corresponding cartography.

Table 4

GEOLOGICAL UNITS		LITHOTECHNICAL UNIT	
(100k Geological map of Italy, n. 140, Teramo) original		(Mzs) original	
code	description	code	description
CRR	marl, marly limestone, intercalation of calcarenite. Marne con Cerrognia Fm.	CO	Consolidated, cohesive geological bedrock.

3. GEOLOGICAL MAP

In Figure 1 Geological Map is reported in a 1kmx1Km square around the station.

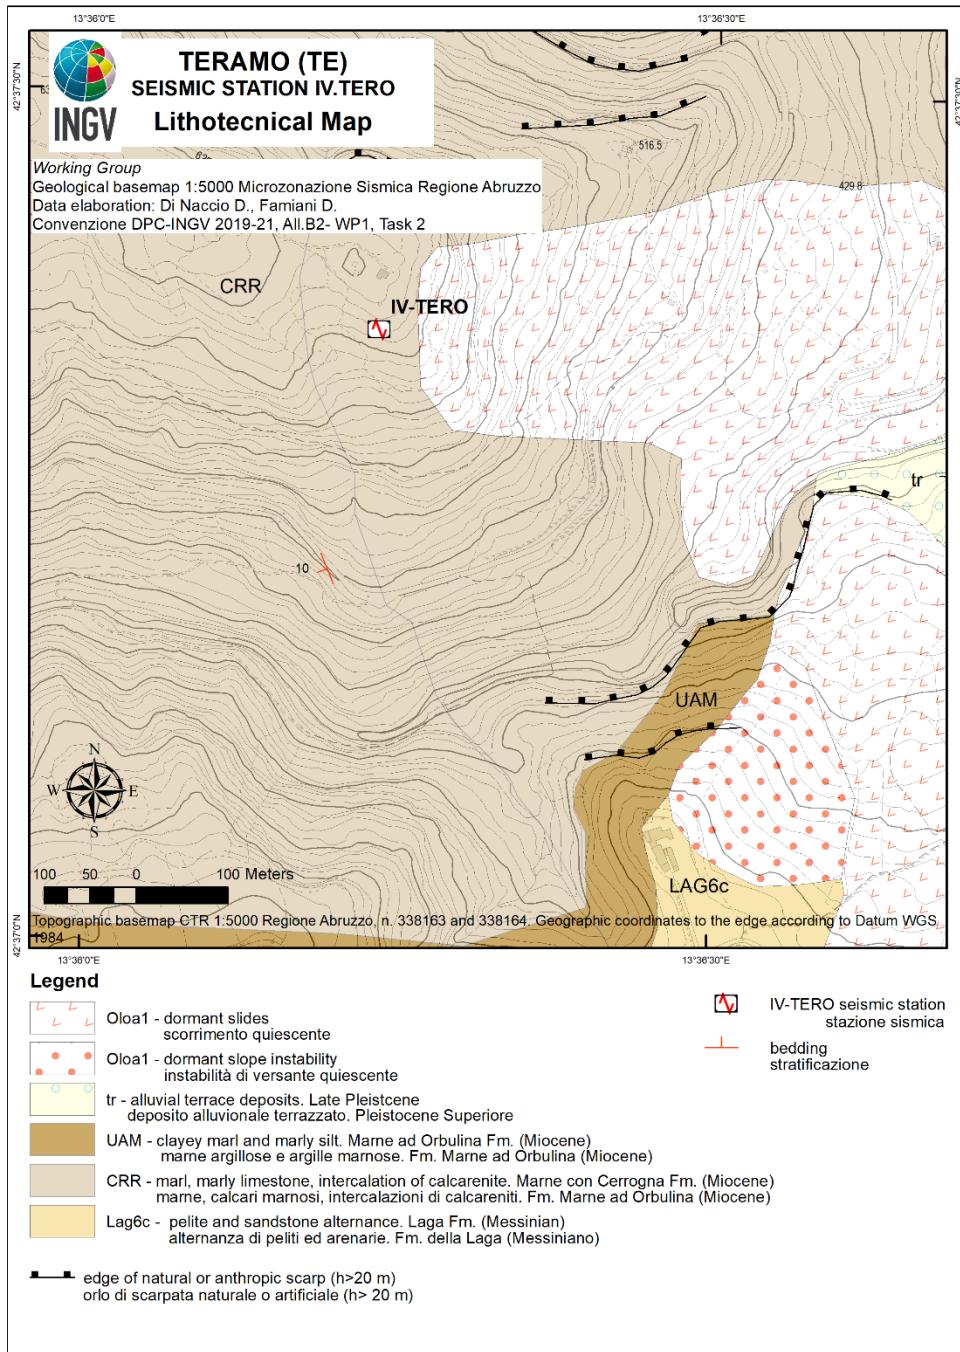

Figure 1. Geological map of seismic station IV.TERO. Scale 1:5.000. Geological units are established according to the nomenclature of geological map of Italy 1:100.000 (Sheet 140-Teramo).

4. LITHOTECHNICAL MAP

In Figure 3 Lithotechnical Map is reported in a 1kmx1Km square around the station.

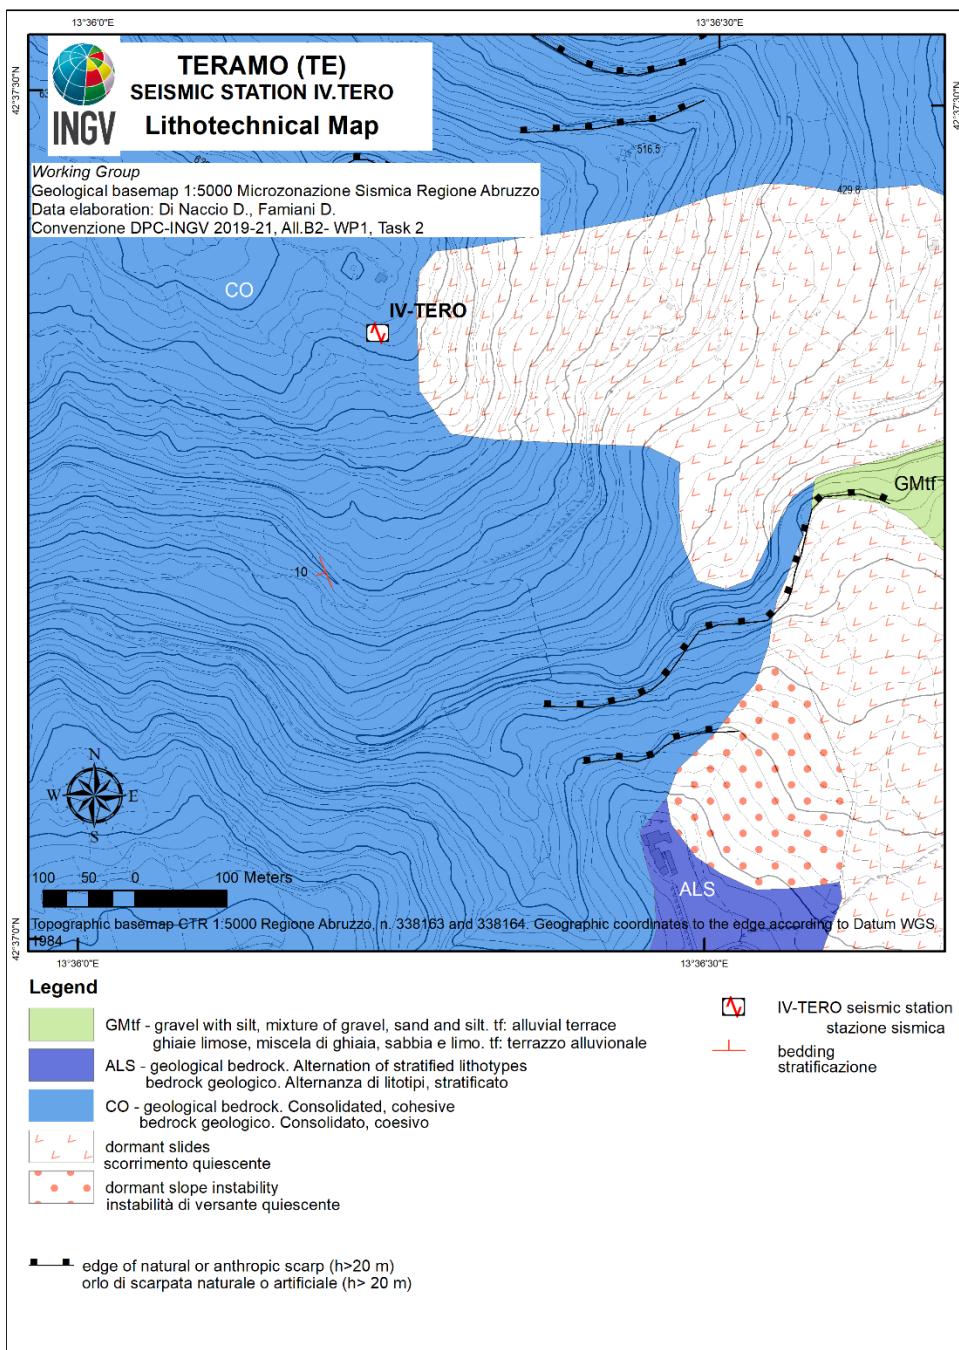

Figure 2: Lithotechnical map of the seismic station IV.TERO. Scale 1:5.000. The lithotechnical units are deduced according to the nomenclature of Seismic Microzonation (Technical Commission MS, 2015).

5. SURVEY MAP

Figure 3 shows the survey Map reported both previous investigations and geophysics surveys conducted by INGV Working Group.

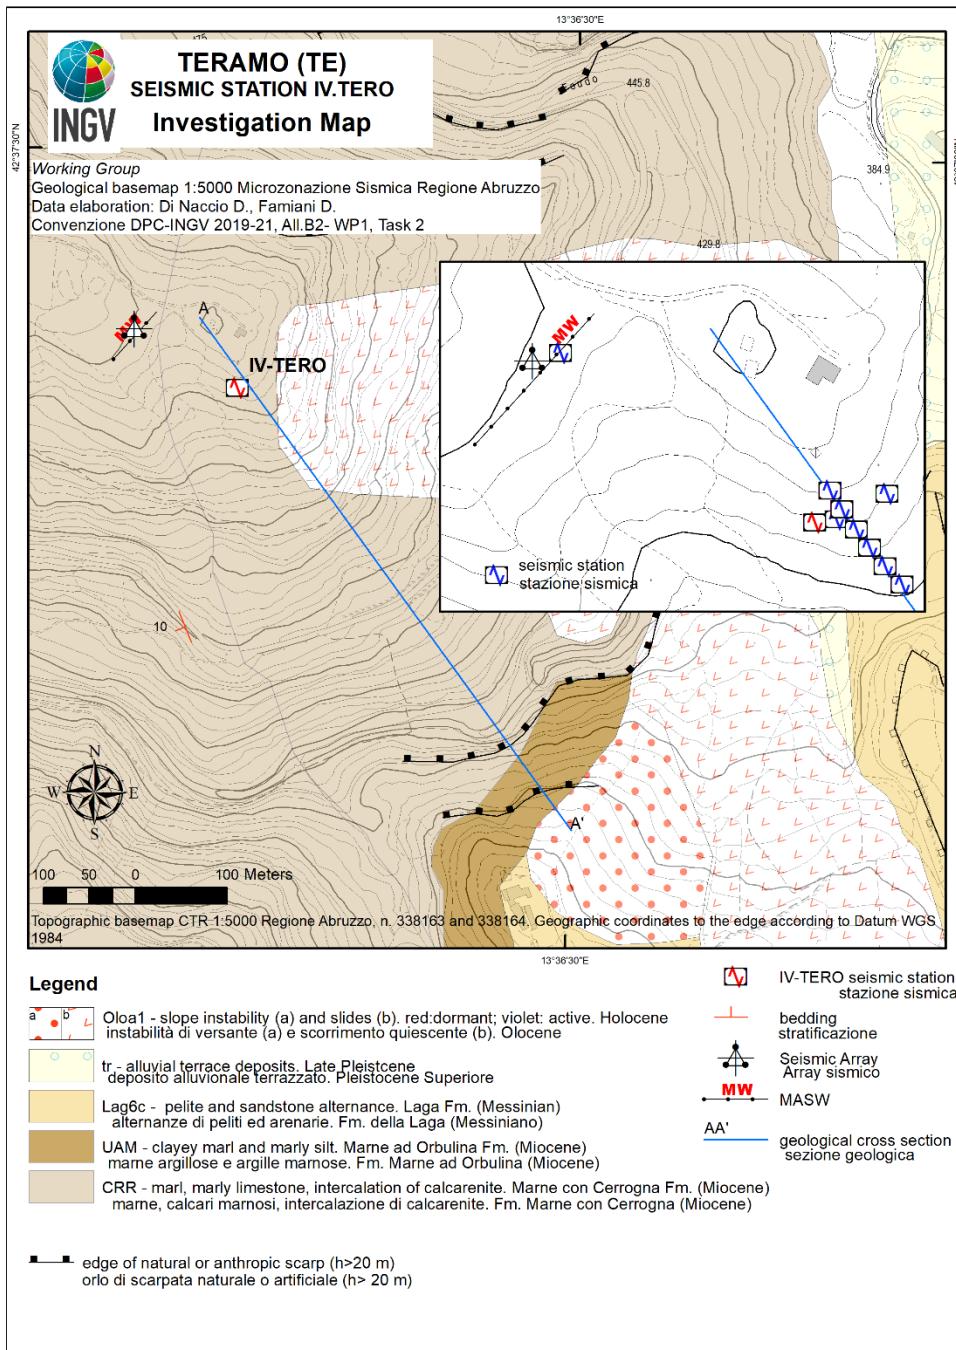

Figure 3: Map of the surveys in the surroundings of the station IV.TERO. Scala 1: 15.000. The box at the bottom right contains a zoom of the area with the detail of the geophysical investigation conducted by INGV Working Group for the seismic characterization of the site (Convenzione DPC-INGV 2019-21, All.B2- WP1, Task 2).

6. GEOLOGICAL MODEL

6.1 General description

The seismic station is located in the piedmont of the Central Apennines in the NE-Abruzzo region.

The front of the chain is located along the Montagna dei Fiori and the Gran Sasso ridges and drops down to the piedmont area. The landscape is characterized by cuesta, mesa and plateau morphologies resulting from the evolution of the Adriatic foredeep domain of the Apennine orogenic system. From the mountain area to the piedmont, the landscape is carved by the main river valleys roughly perpendicular to the coast and by minor catchments flowing toward the main valleys and the coastal plain.

The geological bedrock consists of a sequence of marine pelitic-arenaceous rocks (Upper Miocene–Lower Pliocene) arranged in a fold and thrust setting, affected by regional NNW-SSE oriented Pliocene thrusts and high-angle normal faults, which are still connected to active moderate seismicity. It is overlain by a sequence of marine clayey-sandy-conglomeratic rocks (Upper Pliocene–Lower Pleistocene) in a gently NE-dipping monoclinal setting. Fluvial and alluvial fan deposits, as well as slope, colluvial and landslide superficial deposits (Middle Pleistocene–Holocene) extensively cover the bedrock.

The geomorphologic processes are mainly fluvial, gravity-induced and mass wasting.

The seismic station is at an altitude of ~ 700 m above sea level and is located along the slope flank of a marly carbonate relief. The bedrock is represented by the Marne con Cerroga Fm. consisting of marl, marly limestone, with intercalation of calcarenite and its thickness ranges between 90m to 750m. The bedrock is blanket by a cover of colluvial-eluvial deposits of ~ 3-10m-thick.

6.2 Geological Section

The geological cross section and the subsoil model (Figura 4) accompanying geological survey map provide an interpretation of the third dimension. It is based on the extrapolation of surface data in combination with pre-existing geological studies, recognized local structural style, geophysical investigations performed for the seismic characterization of the site (Convenzione DPC-INGV 2019-21, Allegato B2-WP1, Task B) and the determined seismic velocities profiles (IV.TERO – Teramo; <http://hdl.handle.net/2122/12948>) as well as data from other subsurface sources.

6.3 Subsoil model

The lithotecnical units considered representative of the site around the IT-TER-seismic station (Figures 1-2 and Table 4) are the following:

CO: geological bedrock consisting of marl, marly limestone, intercalation of calcarenite. A thin layer of colluvium-eluvium (MLeC) can not be excluded as recognized by geophysical modeling (IV.TERO – Teramo; <http://hdl.handle.net/2122/12948>).

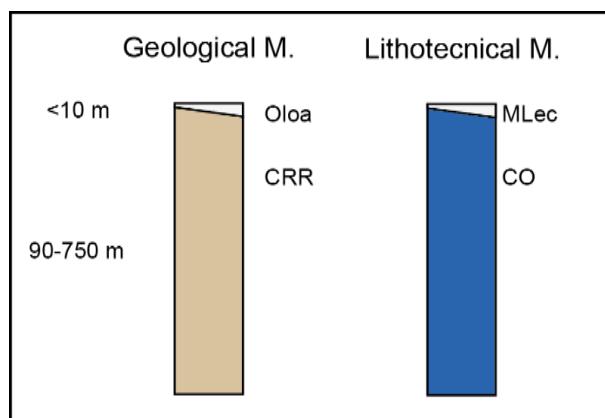

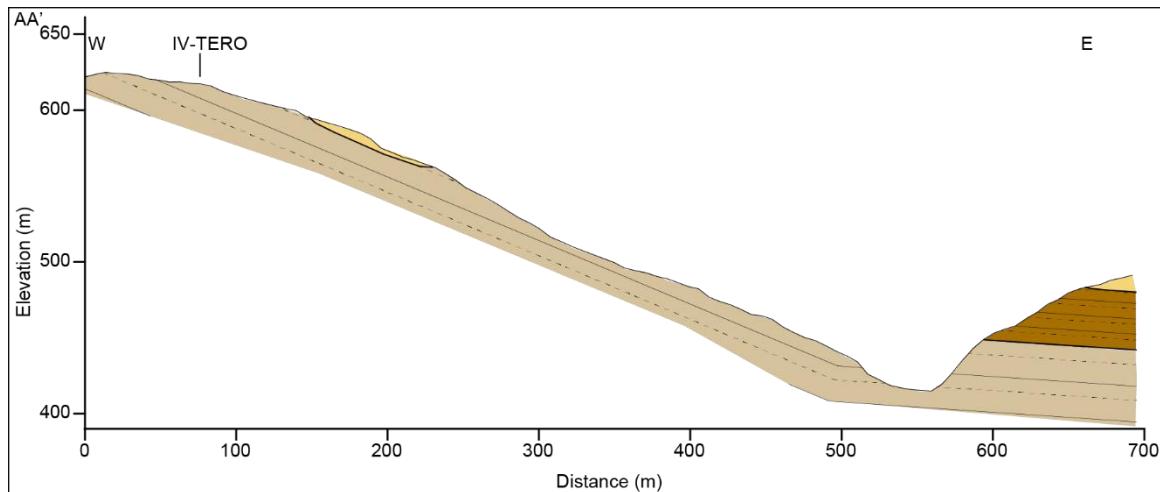

Figure 4: Top: Geological section A-A' crossing seismic station IV.TERO; bottom: subsoil model under the IV.TERO seismic station and classification according to the nomenclature of geological map of Italy 1:50.000 (CARG project): Oloa: colluvium-eluvium, CRR: Marne con Cerrognia Fm.; according to SM: MLeC: inorganic silt, rock flour, fine-grained silty or clayey sand, silty clay of low plasticity, CO: Consolidated, cohesive. bedrock

Disclaimer and limits of use of information

The INGV, in accordance with the Article 2 of Decree Law 381/1999, carries out seismic and volcanic monitoring of the Italian national territory, providing for the organization of integrated national seismic network and the coordination of local and regional seismic networks as described in the agreement with the Department of Civil Protection.

INGV contributes, within the limits of its skills, to the evaluation of seismic and volcanic hazard in the Country, according to the mode agreed in the ten-year program between INGV and DPC February 2, 2012 (Prot. INGV 2052 of 27/2/2012), and to the activities planned as part of the National Civil Protection System.

In particular, this document¹ has informative purposes concerning the observations and the data collected from the monitoring and observational networks managed by INGV.

INGV provides scientific information using the best scientific knowledge available at the time of the drafting of the documents produced; however, due to the complexity of natural phenomena in question, nothing can be blamed to INGV about the possible incompleteness and uncertainty of the reported data.

INGV is not responsible for any use, even partial, of the contents of this document by third parties and any damage caused to third parties resulting from its use.

The data contained in this document is the property of the INGV.

Esclusione di responsabilità e limiti di uso delle informazioni

L'INGV, in ottemperanza a quanto disposto dall'Art. 2 del D.L. 381/1999, svolge funzioni di sorveglianza sismica e vulcanica del territorio nazionale, provvedendo all'organizzazione della rete sismica nazionale integrata e al coordinamento delle reti sismiche regionali e locali in regime di convenzione con il Dipartimento della Protezione Civile.

L'INGV concorre, nei limiti delle proprie competenze inerenti la valutazione della Pericolosità sismica e vulcanica nel territorio nazionale e secondo le modalità concordate dall'Accordo di programma decennale stipulato tra lo stesso INGV e il DPC in data 2 febbraio 2012 (Prot. INGV 2052 del 27/2/2012), alle attività previste nell'ambito del Sistema Nazionale di Protezione Civile.

In particolare, questo documento¹ ha finalità informative circa le osservazioni e i dati acquisiti dalle Reti di monitoraggio e osservative gestite dall'INGV.

L'INGV fornisce informazioni scientifiche utilizzando le migliori conoscenze scientifiche disponibili al momento della stesura dei documenti prodotti; tuttavia, in conseguenza della complessità dei fenomeni naturali in oggetto, nulla può essere imputato all'INGV circa l'eventuale incompletezza ed incertezza dei dati riportati.

L'INGV non è responsabile dell'utilizzo, anche parziale, dei contenuti di questo documento da parte di terzi e di eventuali danni arrecati a terzi derivanti dal suo utilizzo.
